

Outlook & Microsoft 365 Connector

Built by Serr AI — serrai.com.au

What You Need

- Node.js version 20 or higher — check by typing `node --version`
- A Microsoft account (outlook.com, hotmail.com, or work/school Microsoft 365)
- An internet connection

Install — Pick Your Computer Type

Windows: Double-click `setup.bat` and follow the prompts.

Mac: Open Terminal, drag the `setup.sh` file into the window, press Enter.

Manual Install (if scripts don't work)

Open your terminal or command window and run these commands one at a time:

Step 1 — Install the tool:

```
npm install -g @pnp/cli-microsoft365
```

Step 2 — Set up your Microsoft connection (one-time):

```
m365 setup --interactive
```

A browser window will open — follow the steps and click Allow when asked.

Step 3 — Sign in:

```
m365 login --authType browser
```

A browser window will open — sign in with your Microsoft account and click Allow.

Step 4 — Verify:

```
m365 outlook mail list
```

If it shows your emails, you are connected.

What to Say to Your Assistant

- "Show me my unread emails"
- "What meetings do I have this week?"
- "Find the invoice in my OneDrive"
- "Send an email to [name] about [topic]"

- "Show me the latest Teams messages"
 - "Find the budget file in SharePoint"
-

Troubleshooting

Problem	Fix
"m365 not found" after install	Close and reopen your terminal, then try again
Browser does not open during sign-in	Run <code>m365 login</code> instead — it shows a code. Go to https://aka.ms/devicelogin , enter the code, sign in
Wrong account connected	Run <code>m365 logout</code> then <code>m365 setup --interactive</code> then <code>m365 login --authType browser</code>
Work account — Teams or SharePoint access denied	Ask your IT admin to approve the connection during m365 setup
